

## **SWAD Scores**

Meet

 Page	

To calculate the scoring of points for the disability swims you would simply calculate the percentage of the qualifying sectionals time (see attached sectionals time standard table) for each swim in the meet. Meaning that you would need to convert each time from minutes and seconds to just seconds (example: a time 1:29.39 minutes would be 89.39 seconds). Then use this time to compare the time swam divided by the sectional time (also need to convert these times into seconds) standard and then multiply that result by 100 to create a percentage. The swim with the lowest percentage is first, etc.....

Athlete	Event	Finals Time In seconds	Sectional Para Time In seconds	Calculated Value	Place
